Feedback for fourth iteration:

General:

1. Make the buttons on the top right twice bigger (don't overlap with game, but it should definitely be bigger and more noticeable
2. When someone first hops on the portfolio, caffeine should be at 0/7 and sleep should be at 8/8
    a. After waking up, after every ~15 seconds, have the sprite say "where can I get a RedBull…" or some iteration of prompting/hinting the user to get a redbull from the refrigerator
        i. After the redbull, just keep caffeine at 7/7.
        ii. When drinking the redbull, there are "stars" coming out of the sprite briefly.
        iii. After caffeine at 7/7, sprite walks 30% (or noticeably) faster. Maybe start off having the sprite walk a bit slower for this change to be obvious.
    b. After every 90 seconds, have the sleep level go down by 1. Once it hits 2/8, have the sprite keep commenting every ~15 seconds "I'm so tired," "I want to take a nap…" or some iteration of prompting/hinting the user to go sleep
    c. With every level
        i. If sleep hits 0/8, have the sprite comment something like "i need to sleep" and go to the nearest bed and just sleep
    d. Replace curiosity with creativity, keep always at 200/200
3. For some reason, the sprite walks really slowly sometimes. Not sure why, but please fix.

Dorm room:

1. Remove the "consulting stuff" words from the binder and just make it a binder

2. Put the Instagram logo on the phone for marketing work:

3. Have the “Home Toronto” words be slightly bigger
4. Have the “Hope For Hearing” words on the shirt be slightly bigger
5. Add a mini basketball hoop on the left wall, between the bean bag and laundry basket.
    a. Add an interactable mini basketball on the carpet.
    b. Pressing space can shoot the basketball.
        i. Ball shoots based on how long space is pressed for. (if pressed too long, bounces off the backboard. If too little, misses the basket.
        ii. Make the physics are as realistic as possible here.
        iii. Have the basketball land in different places in the room when necessary.

Toronto Home Room

1. Solo Levelling, Sweet Home, and Lookism aren't properly centered and aligned with the book's spine. Fix.
2. Have the "Return to UCLA" text slightly bigger
3. Make the speaker slightly smaller
4. Make the carpet slightly wider
5. Make it such that you can play the black keys on the piano somehow
6. Add my phone on the table with the same Instagram logo, except this time, when interacting with it, it displays my Instagram handle. (don't add this to the 19 items we have to find, not necessary, only a plus)
7. Make the volleyball slightly bigger, and make it the yellow/black/orange wilson design
8. Make it such that you can also sleep on the home bed
9. For the cat:
    a. Make it so it's "About Fluffy"
    b. Have it so that fluffy can jump on desks and tables and make things drop on the ground/move around on the table (except interactable objects, which should be fixed)
